Telford, PA 18969

Compressor Protection

The refrigeration compressor is designed to compress vapor only. A **suction line accumulator** prevents compressor damage from a sudden surge of liquid refrigerant and oil that could enter the compressor from the suction line.

The suction line accumulator is a temporary reservoir for this mixture, designed to meter both the liquid refrigerant and oil back to the compressor at a safe rate. This prevents damage to the reed valves, pistons, rods, and crankshafts of the compressor.
